ACADEMIC PROJECT

IoT-Based Garbage Monitoring System

The primary objective of the IoT-Based Garbage Monitoring System is to provide timely and accurate information about the fill-level of garbage bins throughout a city or urban area. It employs ultrasonic sensors installed within the bins to measure the fill-level and transmit the data on wireless network to a centralized platform. This project provides real-time data on garbage levels to optimize waste collection routes and schedules which reduces unnecessary trips and fuel consumption by garbage collection trucks
